

Innovators Community

As an industry-leading telecommunications software and solutions provider, Metaswitch is at the forefront of the revolution that is transforming carrier networks from monolithic, closed environments to open, flexible platforms for innovation. This revolution is transforming both the expectations of subscribers for their communications services and devices, as well as the best practices that service providers employ to meet their customers' needs.

Many vendors have rushed to market with developer programs that provide very little in the way of support and a "come one, come all approach." This results in developers feeling left adrift and the development of applications that are neither particularly useful nor "carrier-class."

A New Approach

The Metaswitch Innovators Community was conceived as an approach to collaborative software development, in the spirit of our own industry-renowned best practices. The online community fosters a relationship between

our carrier customers, select external partners, and Metaswitch, with many of our own top engineers actively participating. This combination ensures both relevance and quality, with active feedback and discussion between a broad range of customers and Metaswitch engineers.

The Tools to Succeed

The Metaswitch Innovators Community is an online social business community set up to help Metaswitch customers and third parties develop innovative applications to work with Metaswitch products.

The community provides

- Sample Code
- Open Source Projects
- API Help and Documentation
- A Sandbox Test Environment
- Discussion Groups
- Blogs

Most importantly, though, the community provides a place where developers can share and discuss ideas and code.

The Metaswitch Innovators Community is growing all the time. Here is a snapshot of what is available today.

▶ Active Projects

- Billing Record Processing
- User-facing GUIs
- Subscriber Management
- Subscriber Provisioning
- Statistics Reporting
- Diagnostics

▶ Community Resources

- Blogs
- Discussion Groups
- Regular newsletter

▶ APIs to Metaswitch Products

- MetaSphere Call Feature Server
- MetaSphere Enhanced Application Server
- MetaView NMS
- CommPortal

▶ Sample Code

- Java
- JavaScript
- PHP
- C#
- C
- C++
- Perl
- Python

▶ APIs

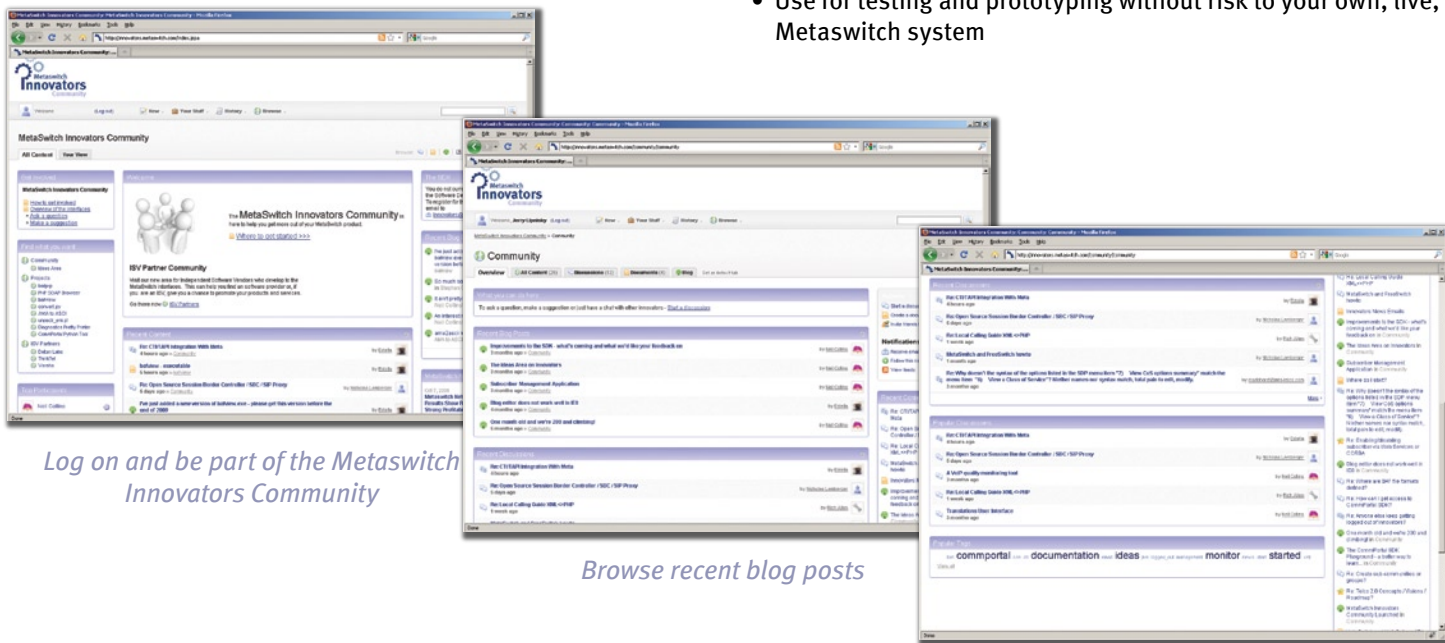

- SOAP
- JavaScript
- JSON
- CORBA
- SNMP
- SQL

▶ Help and Support

- Documentation
- Step-by-step tutorials
- Discussion Groups

▶ Sandbox Environment

- Hosted sandbox environment
- Use for testing and prototyping without risk to your own, live, Metaswitch system
